

Volodymyr Yahello

SDET/Automation QA engineer

github: <https://github.com/vyahello>
email: vyahello@gmail.com
mobile phone: +380931403184

Summary

I'm passionate python test automation engineer with over 4 years of commercial experience within qa, networking and development operations. I have a solid experience in building projects from the scratch using python related tools. All projects are complied with best coding practices, ci/cd support and static code analysis procedures.

My personal motivation is to find a project that will help me to reflect my professional skills as a strong dev/automation engineer.

Contribute to open source projects in spare time. Plan to launch fully-fledged blog in the near future.

Skills

Programming Languages/Technologies

- python
- bash
- groovy

Development frameworks

- flask-like (responder, quart, bottle)
- api star
- pyramid
- django

RDBMS

- mysql
- sqlite
- sqlalchemy

Methodologies

- scrum
- kanban

Operating Systems

- linux
- raspberry pi os
- microsoft windows
- cisco ios/nx-os

Test Management/Tracking Tools

- tims, qtest, testrail
- rally
- jira

CI Servers

- jenkins
- travis
- github

Testing frameworks

- pyats
- pytest
- unittest
- doctest
- selenium/zalenium
- robot framework

Version control system

- git
- gerrit
- svn

DevOps/Monitoring

- docker, docker-compose
- elasticsearch & kibana

Embedded

- raspberry pi 3/4

Other

- html, css, js (basics)
- oop, ood, procedural
- networking stack (I2/I3 layers)

Experience

Project Description: Company: Involvement Duration: Project Role: Responsibilities:	Cisco Security Monitoring and Defense. Monitor, detect and analyze network threats. SoftServe 3 years 9 month Automation QA/Python Engineer; <ul style="list-style-type: none">▪ automate functional, system and performance testing with python;▪ develop monitoring system with python and elk (elasticsearch & kibana) stack;▪ build CRUD rest micro-services with flask-like api;▪ development with best practices according to pep8 style;▪ release automation with docker and ci/cd;
Tools & Technologies:	python, bash; flask; pyats, pytest, unittest, doctest; linux, cisco, windows; docker, jenkins, elk, git; selenium, zalenium, pom; scrum ; static analysis (pylint, mypy, pydocstyle, flake8, black, autopep8)
Project Description: Company: Involvement Duration: Project Role: Responsibilities:	Research tools for traders. The objective of a project is to find the best trading strategies. Inferstat Ltd 3 months Python Developer (freelance) <ul style="list-style-type: none">▪ build code assessment according to pep8 style;▪ create unit tests;
Tools & Technologies:	python, pytest, git, travis, scrum, code analysis tools (pylint, flake8)
Project Description: Company: Involvement Duration: Project Role: Responsibilities:	Embedded test automation. Firmware test automation of Ring doorbells and video-cameras. Ring Ukraine 11 months Python SDET <ul style="list-style-type: none">• automate functional tests and tools for tests analysis;• support daily/weekly/release test automation runs;• build test automation report;
Tools & Technologies:	python, pytest, asyncio, bash, linux, raspberry pi, jenkins
Certificates	<ul style="list-style-type: none">▪ Brainbench Python 2.4, 3.3, 3.4 (Master)▪ Brainbench Linux Administration (General) <p>Please follow 14193415 certificate transcript</p>
Education	Master's degree; Ivan Franko National University of Lviv Graduate (2010-2016)
Languages	English – Upper Intermediate Polish – Intermediate
